Understanding NHS hospital admissions in England, Scotland and Wales: data linkage to the King’s Centre for Military Health Research Cohort (KCMHR) Study

**Objective**
- In this study we develop a method to join EHRs for England, Scotland and Wales to produce a national dataset of health and social care.

**Method**

- **Key Results**
  - 6336 participants were matched
  - APC events were consistently coded with full completeness on diagnoses
  - Outpatient admissions were poorly coded
  - A&E records were sparsely coded
