# Understanding NHS hospital admissions in England, Scotland and Wales: data linkage to the King's Centre for Military Health Research Cohort (KCMHR) Study

Objective

- In this study we develop a method to join EHRs for England, Scotland and Wales to produce a national dataset of health and social care.

Method

Key Results

6336 participants were matched

APC events were consistently coded with full completeness on diagnoses

Outpatient admissions were poorly coded

A&E records were sparsely coded
